ASHUTOSH TRADE

FREE OPERATIONAL TOOLKIT

The 30-Point Facility Supplies & Cleaning Operations Audit

Find cost leakage, stock risks, supply gaps, and machinery downtime before they disrupt your facility.

Hospitals	Schools	Hotels
Commercial Buildings	Offices	

Prepared by **Ashutosh Trade**

Housekeeping supplies, facility products, and cleaning machinery

START HERE

Turn 15 minutes into a clear action list

This toolkit helps you see where money, time, and service quality may be leaking across procurement, stock control, cleaning operations, and machinery management. Complete it with the person who orders supplies and the person who uses them.

1. Audit

Mark YES only when a process is consistently in place, documented, and followed.

2. Score

Give yourself one point for every YES. Your total is out of 30.

3. Prioritize

Circle the three NO answers that create the highest cost, safety, or service risk.

4. Act

Use the 30-day plan to assign an owner, deadline, and measurable outcome.

Facility snapshot

Organization		**Facility type**	
Location		**Audit date**	
Monthly supply spend		**Active suppliers**	
Rooms / beds / desks		**Cleaning shifts**	

AUDIT SECTION 1

Procurement and supplier control

Mark YES only when the statement is consistently true. Add one point for each YES.

1	We know exactly how many active suppliers are used for housekeeping, facility products, and cleaning machinery.	☐ YES	☐ NO
2	We maintain one approved master item list with clear specifications, pack sizes, and preferred brands or equivalents.	☐ YES	☐ NO
3	Supplier quotations are compared using the same unit, pack size, tax, and delivery assumptions.	☐ YES	☐ NO
4	Every key supplier has agreed delivery windows and a clear process for urgent requirements.	☐ YES	☐ NO
5	Critical items have an approved alternative product or backup source before a shortage occurs.	☐ YES	☐ NO
6	Monthly spend is consolidated by category so we can see the real cost of fragmented purchasing.	☐ YES	☐ NO
7	Duplicate or near-duplicate products are reviewed and removed from the approved list.	☐ YES	☐ NO
8	Contract prices, discount periods, and quotation expiry dates are tracked before orders are placed.	☐ YES	☐ NO
9	We compare total delivered cost, not just the lowest listed unit price.	☐ YES	☐ NO
10	One accountable contact owns supplier issues, substitutions, credits, and delivery follow-up.	☐ YES	☐ NO

AUDIT SECTION 2

Inventory, usage, and product control

Good inventory control protects service quality while releasing cash tied up in unnecessary stock.

11	Minimum, maximum, and reorder levels are defined for critical consumables.	☐ YES	☐ NO
12	Stockouts and emergency purchases are recorded, reviewed, and linked to a corrective action.	☐ YES	☐ NO
13	Slow-moving, obsolete, damaged, and expired stock is identified at least monthly.	☐ YES	☐ NO
14	Chemical dilution and dispensing methods are standardized to reduce overuse and inconsistent results.	☐ YES	☐ NO
15	Chemical labels, usage instructions, and safety information are available where products are stored and used.	☐ YES	☐ NO
16	Color coding or another clear system prevents tools from moving between incompatible risk areas.	☐ YES	☐ NO
17	Usage is measured against a relevant unit such as occupied room, bed, student, desk, or square meter.	☐ YES	☐ NO
18	Reorders are triggered early enough to avoid premium freight, rushed approvals, or substitute products.	☐ YES	☐ NO
19	Dated products follow first-expiry-first-out rotation and storage conditions are checked.	☐ YES	☐ NO
20	Storage areas are clean, organized, access-controlled where needed, and separate incompatible products.	☐ YES	☐ NO

AUDIT SECTION 3

Machinery, training, and continuity

A machine only creates value when it is available, suitable for the task, and used correctly.

21	We maintain an asset register for cleaning machines, including model, serial number, location, and purchase date.	☐ YES	☐ NO
22	Operators complete a simple pre-use check for cables, batteries, tanks, pads, brushes, filters, and visible damage.	☐ YES	☐ NO
23	Preventive maintenance dates are scheduled and visible before service becomes overdue.	☐ YES	☐ NO
24	Machine downtime, repair cost, and repeat faults are tracked to guide repair-versus-replace decisions.	☐ YES	☐ NO
25	Each machine is matched to the floor type, area size, cleaning task, and operator capability.	☐ YES	☐ NO
26	Operator training and refresher training are recorded for every major machine or chemical system.	☐ YES	☐ NO
27	Required personal protective equipment is available, correctly sized, and used during relevant tasks.	☐ YES	☐ NO
28	Frequently needed spare parts, batteries, pads, brushes, filters, and consumables have defined reorder levels.	☐ YES	☐ NO
29	Purchasing decisions compare lifecycle cost, productivity, service support, and consumables - not price alone.	☐ YES	☐ NO
30	The team has agreed one measurable cleaning-operations improvement to complete in the next 30 days.	☐ YES	☐ NO

YOUR RESULT

What your score means

Total your YES answers. The score is a conversation starter, not a compliance rating.

24-30
CONTROLLED
Your basics are strong. Focus on measurement, supplier consolidation, and continuous improvement.

16-23
IMPROVEMENT ZONE
Several processes rely on individual effort. Standardize the highest-risk gaps first.

0-15
HIGH LEAKAGE RISK
Cost, stock, or service disruption is likely. Build controls around critical products and machines immediately.

My score

YES answers **/ 30**

Top three NO answers to fix

1. _____
2. _____
3. _____

PLANNING TOOL

Build a simple reorder system

Use this worksheet for your ten most important consumables. Start with items that stop service when they run out.

AVERAGE DAILY USE	Quantity used during the period / number of operating days
REORDER POINT	Average daily use x supplier lead time + safety stock
MAXIMUM LEVEL	Reorder point + order quantity, adjusted for storage life and space

Item	Daily use	Lead time	Safety stock	Reorder point	Owner
1					
2					
3					
4					
5					
6					
7					
8					
9					
10					

Tip: do not add arbitrary safety stock. Base it on demand variation, delivery reliability, product shelf life, and the operational cost of a stockout.

SECTOR LENS

Risk triggers by facility type

Use the questions below to make your action plan relevant to the way your facility actually operates.

Hospitals and clinics

Are product approvals, isolation-area tools, chemical instructions, PPE, and emergency stock levels aligned with your infection-prevention and clinical requirements?

Schools and colleges

Are chemicals secured from students, high-traffic washroom supplies planned for peak periods, and staff trained for spills and event-day demand?

Hotels and hospitality

Are par levels linked to occupancy, guest-facing standards consistent, linen and amenity usage measured, and machines available during turnaround windows?

Commercial buildings

Can usage be compared by tenant, floor, or square meter, and are common-area standards, contractor responsibilities, and after-hours deliveries clearly defined?

Offices

Are dispensers, paper goods, pantry supplies, and cleaning frequencies standardized across locations and adjusted for hybrid occupancy?

My facility's highest-risk operating period

Period / event _____

Likely supply risk _____

Prevention action _____

DECISION TOOL

Compare suppliers on value, not price alone

Score each supplier from 1 (weak) to 5 (excellent). Multiply the score by the suggested weight, then compare totals.

Criteria	Weight %	Supplier A	Supplier B	Supplier C
Product fit and quality consistency	20			
Delivered cost and transparent pack pricing	20			
Delivery reliability and urgent response	15			
Range consolidation across categories	15			
Training, demonstrations, and technical support	10			
Machinery service and spare-parts support	10			
Reporting, issue resolution, and accountability	10			
TOTAL	**100**			

Commercial note

Before switching, compare like-for-like specifications, sample critical products, confirm service coverage, and agree how substitutions and credits will be handled.

ACTION TOOL

Your 30-day improvement plan

Choose three actions only. A short completed plan is more valuable than a long list with no owner.

Priority action	Why it matters	Owner	Due date	Measure of success
1				
2				
3				

30-day review questions

1. What changed in cost, stock availability, service quality, or machine uptime?
2. Which control is now documented and repeatable without relying on one person?
3. What is the next single improvement that will create the greatest operational value?

Want help turning your audit into a supply plan?

Book a free one-to-one Supplier Consolidation Check with Ashutosh Trade. We will review your categories, current supplier mix, critical stock risks, and machinery needs - then show where consolidation could save time and reduce operational friction.

About Ashutosh Trade

Ashutosh Trade supplies housekeeping consumables, facility products, and cleaning machinery for hospitals, schools, hotels, commercial buildings, and offices. Our aim is to make sourcing simpler, comparisons clearer, and supply support more accountable.

Important note

This toolkit supports operational planning only. It does not replace facility-specific risk assessments, manufacturer instructions, infection-prevention protocols, occupational safety requirements, or applicable laws and standards.
